

	Date	MD Sir	Major Changes	Minor Changes	Issues	Good to Have	2+ Man Hours	Team Remarks
Planning	31/03/2025		-From rate analysis the material requirements should populate based on the S&B 1 quantities) -Cost and Estimate variance - amount says it should be activity wise like shuttering reinforcement casting -Material items should be in the bill of material from K3 team	-Should give error on close loop -no shared database need to be in direct duration -Labour details should be in an error	-Start to start should show paths in gantt chart		24	
Budget	31/03/2025		-Safety, quality and store will be accounted in the budget -Should treat a task by month subcategory in budget -The line items should be populate from rate analysis -In budget there will be reference of the rate analysis -The overheads might have the category and subcategory and it will be derived from the rate analysis	-Need inputs on the dashboard/inputs for management from K3 team			20	
Central Hub	31/03/2025				-Better visualization-Assess with RTO passing, Serial Numbers, Insurance details, and maintenance details.	- Transportation Empty Bill	4	
Store	31/03/2025		-Need to add the transporting amount . Can be mentioned in the purchase order and invoice itself	-Asset not need a Project -Need to add new entry type as local purchase type -Local purchase is store use only use -Also should wait 2 more type safety & quality purchase -Need to add the invoice date and receipt date and delivery challan date	-Need a approval flow for item / material creation -Material item creation will be in purchase Department -able to add inventory material / Delivery note will required. -store will make like an material or asset.		4	
Subcontractor	31/03/2025		-Workflow Standardization: Establish a mandatory Work Order (WO) creation process where payment stages are attached at the point of submission. Subsequent payment applications will be triggered within the active WO / update and create invoice after WO is -Work Categorization: Integrate "Type of Work" (e.g., Shuttering, Reinforcement, or Combined) across Work Orders / Subcontractor invoices and Payment Slips. -Invoice Consideration: Implement a feature to combine subcontractor invoices, allowing a single billing entry for multiple payment stages. Previously decided to go with separate variations and invoices. -Compliance Review: Re-evaluate the mandatory GST requirement for subcontractors; current feedback indicates existence of non-GST registered Subcontractor. Previously Decided to go with GST included Subcontractor -Need Subcontractor Est form which will have Finance details of WO, Payments, Feedback, Labour and resources, etc	-Export Functionality: Enable Export report for payment stages to be attached as official documentation to the Work Order. -Ownership Transparency: For proprietary firms, the system must capture the identity of the actual owner (e.g., spouse or family member) for risk assessment. -Field Renaming: Update "Total Bill Amount" to "Total WO Amount" and "Bill Paid Amount" to "WO Paid Amount" for better alignment with contract terminology. -Subcontractor categorization from Subcontractor Group. Rename "Subcontractor Group" to Nature of Work (e.g., Concrete, Shuttering) to improve reporting accuracy. -Calculation Formula: Standardize the "Current Amount + Cumulative - Previous" logic for invoicing, while allowing for custom formula variations based on specific use cases.			20	
Labour	31/03/2025		-Attendance Segregation: Capture attendance for both skilled and unskilled labour, while ensuring "Daily Labour Reports" (DLR) specifically allow unskilled labour date -Site site Transfer: Track labour movement between different client sites (e.g., VTP to Kolhapur). System logic must exclude travel time from payable hours. need timestamps -Digital Onboarding: Implement biometric (fingerprint) integration for all labour onboarding. -In task, as labour resource. Resource Functionality: Add an "Available Labour" field in the "Task Resource" module, auto-populated by the previous day's total attendance (skilled and unskilled). -The Unskilled Labour Works more than one Activity in single Day, need to update the existing flow. current we measure only one task considering , a labour works on only one Activity for one day -If labours are used on the quality/control/safety department then they should be notified number of labours are used for your department -Transportation details in supplier quotation -Purchase dashboard - Material requests, POs, POs -Loan and accounting in report -S&B should get details of invoices				18	
Purchase	31/03/2025						4	
Accounts	01/04/2025						16	
Safety	01/04/2025		-Site Observations - Create a activity/task against responsible Engineer Can be based on daily/monthly/weekly -In case of accident, it should highlight on the system to all project users -Digital part of the bundle of labour -Safety checklist - mandatory several photo -Need to add asset needs safety inspection -Need the observations report form -Highlight warnings -Observational observation issues -Responsible employee - New task is created and assigned -Need to fix in current Standardization -Need location - flow 2 -Need Proper Requirements of Observation Form As Per Discussion on 18-18 March, Work Permit will not be the part of System, as they required Client Approval.	- Labour onboarding - Multi location/project selection. Labour can work on multiple projects - Safety dashboard - Maintenance & Schedule. If that the responses to safety issues - Cost center number can be about open request data like active request - Need to add the field of town/Project/Area Incharge and location to the Incident for - Calendar events - Photo/Mapping - Highlight the critical incident/accident/near miss to every - Audit - Good Practice records		20	(without good to have)	
Quality	01/04/2025		-In Quality Checklist Inspection form, the field "Structural Member" is not a link field to user it's a list of options (Slabs, Bar, etc). K3 Team will give the list. -RFI Issues: quality checklist for pour card and other quality checks -For safety quality failure note create notification task -New Feature: Like safety new notification task, same should happen against quality observation (NCR) -""Concrete"" -Need to track -Physical / Timing / Completed quantities -Weight / tolerance -If report tolerance - highlight -Concrete checking the slump, flow/void check -The all the quality checks like concrete pour card and others are linked to RFI -In RFI because master data for them -This listing needs to be added in the system Apply to safety and quality If timing Permit needs about Logs, Need to add Logs from Project. If the client is in the same area of it, it is similar from the system which has two logs and most of the checklist Then need to update all the Client docs (15-20) and "client configuration settings" (logs) in the system" Give Client access of Checkins and Inspection Records. So Client can Review and give Approval Digitally. Reducing Paperwork ""Only client (with email id/phone number) open it, no one else"" Client can add the remarks Reminder - Please review and complete it Consultant Can review Details of Project After Completion on System. Need To give open Accessible links. Need to fix how and What data needs to show to Consultant.	- Notifications should have Acknowledgement - Seen by XYZ - Material Inspection Id should be K3-001-001 - Need design site documents - Need Verifiably Report Document - - It captures if all the measured points are as per quality check / expectation. - Site/Milestone view - measurement inputs - Deviation tolerance - Need Concrete summary document		40	(Need a closed integration with task manager and establishing the new RFI lowest flow) RFI need to add new forms , earlier all client doc were kept out of system integrating them and implementing client portal in to system will take effort.	
Contracts	01/04/2025						48	(Needs additional efforts as it impacts on multiple modules)
Task Manager	01/04/2025		-Performance against the resource utilization -Task can be date and time based time can be selected in the task like expected time and date	- Task Classification: Introduce specific task types for shuttering, reinforcement, etc. -Task accepted / Acknowledgement notifications	-Automatically populated designations based on user -Show task fields based on the task type		24	(Needs additional efforts as multiple modules are connected to this)
RFI and Permit	01/04/2025		All Good		- Update the letter head and it should have note like Computer/Phone/One generated document with timestamp		2	
Other / System Wide Settings	01/04/2025						12	
Development Man Hours							236	
Testing Man Hours (15%)							35	
Deployment Man Hours (10%)							23	
Total Man Hours							334	

Other/System wide Changes

Rate analysis becomes true sources for resources.All the quantities should be considered from rate analysis.

Notifications should have the acknowledgments - Seen by XYZ

For safety quality failure note create notification task

Request for inspection ID and Flow

On click number cards it should open relevant data like active incident

Establish Global Project Configuration: Implement a centralized system for global project settings to define project-specific default values and behaviors.

Automated Field Preselection Based on Assignment: When an engineer is assigned to a specific project (e.g., Project X), relevant data fields should be automatically preselected or filtered based on that project's configuration.

Example: The "Target Observation Site Street" field should auto-fill the designated neighborhoods for the assigned project, minimizing manual input errors.

Dynamic Project Workspace Switching

Introduce a "Project Workspace" feature that allows engineers working on multiple projects to easily switch context.

Switching the workspace should dynamically update the preselected fields and configurations to align with the newly selected project.

Secure Project Management Platform: The process for manually changing an engineer's project assignment should be secured and streamlined, requiring validation, such as One-Time Password (OTP) authentication.

Project-Specific Notification Management: Develop a mechanism to manage and deliver notifications based on the relevant project context.
